

Introduction

2019 RMMC Summer School Inverse Problems in Imaging

Jodi Mead
Department of Mathematics

BOISE STATE UNIVERSITY

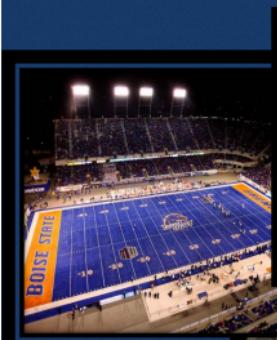

My background

- Professor of Mathematics, co-Director Computing PhD, Associate Dean in Residence Graduate College, Boise State U.
- PhD in Computational Math, Arizona State University, 1998
- Postdoc in Oceanography, Oregon State University
- Visiting faculty: Computer Science, Portland State U. and National Centre for Groundwater Research and Training, Adelaide Australia

BOISE STATE UNIVERSITY

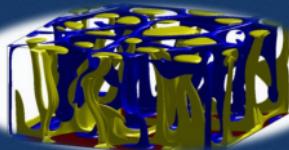

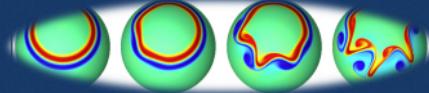

Boise, Idaho

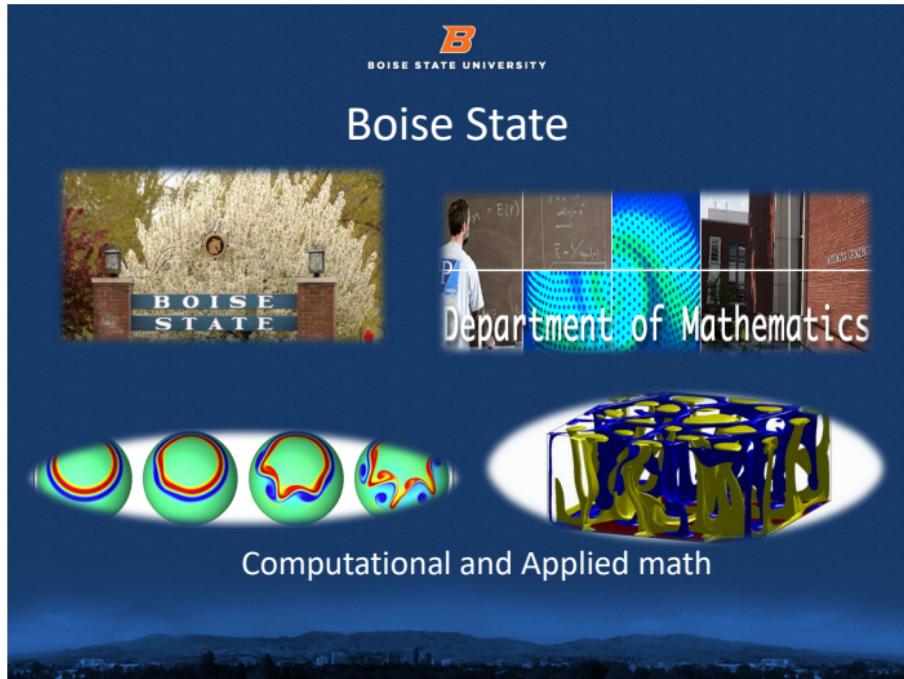

BOISE STATE UNIVERSITY

Boise State

Computational and Applied math

BOISE STATE UNIVERSITY

Geoscience at Boise State

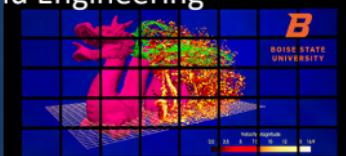

BOISE STATE UNIVERSITY

Computing PhD at Boise State

Computational Science and Engineering

Computer Science

Data Science

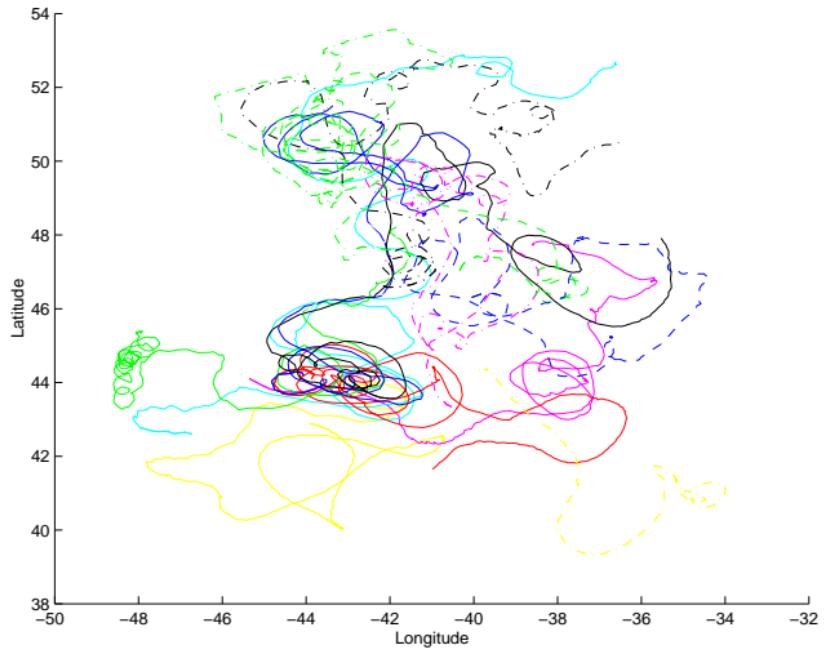

Cybersecurity

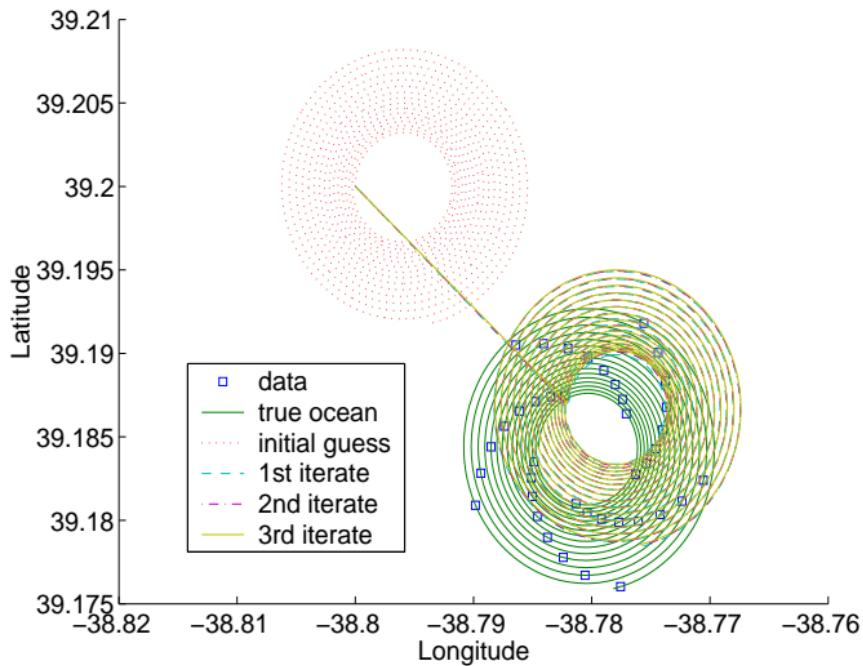

BOISE STATE UNIVERSITY

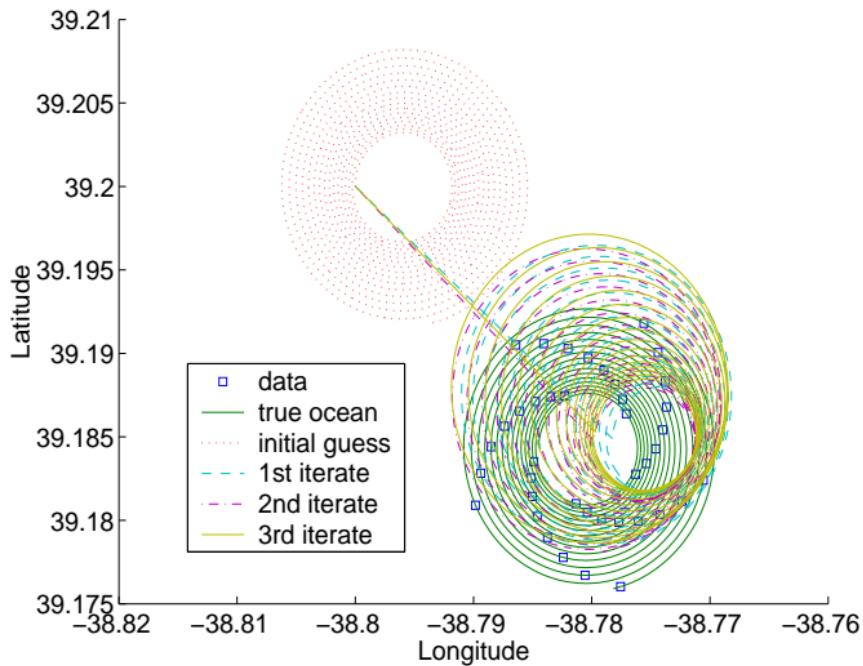

Oceanographic float data in the North Atlantic

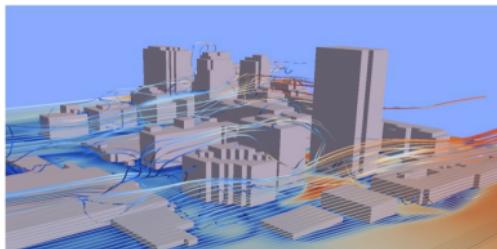

Assimilation Results from Experiment 1

Assimilation Results from Experiment 2

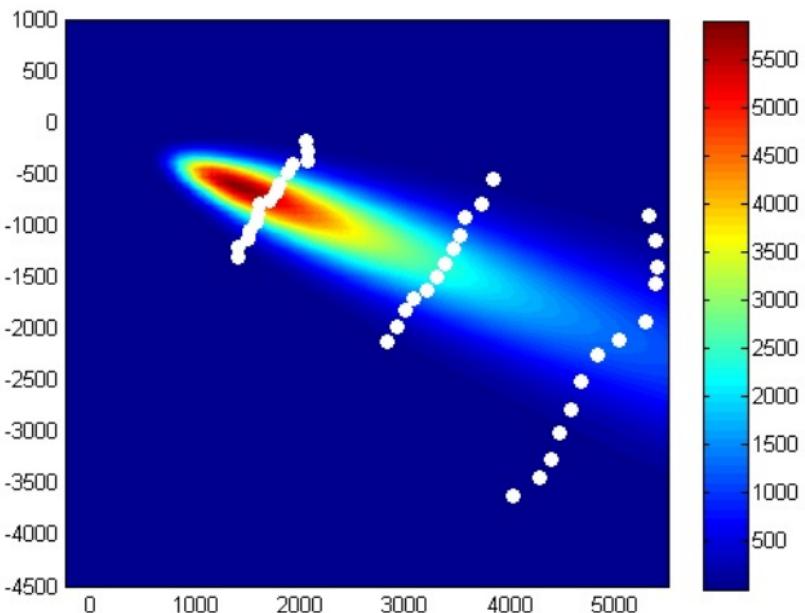

Atmospheric releases in an urban environment

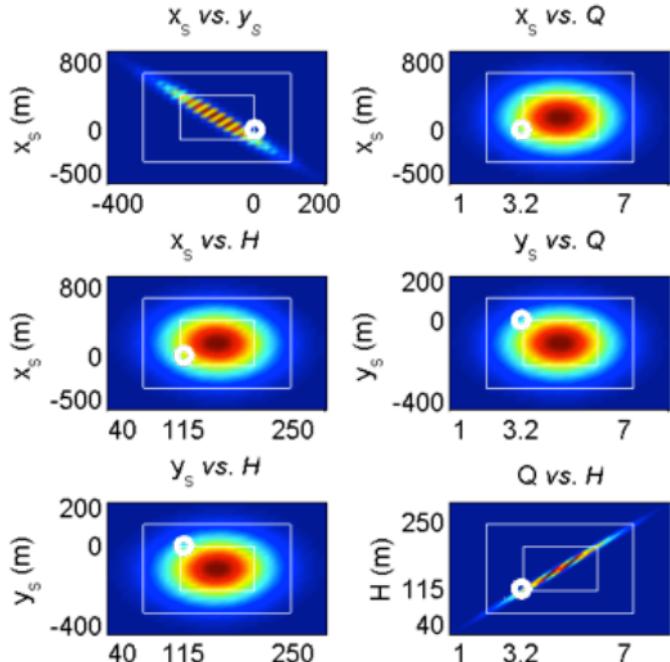

- Chemical or biological agent released into atmosphere
 - Homeland security (bioterrorism)
 - Environmental monitoring (nuclear, pollution)
- Determine source location and emission rate or strength
- Simulate spatial and temporal evolution of contaminant

Fixed network of concentration measurements

Parameter estimates and their uncertainty

Hydrological Processes

Soil Moisture

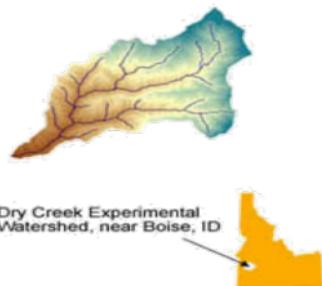

- Can significantly impact weather patterns and precipitation.
- Controls whether precipitation absorbs into, runs off, or evaporates.

Dry Creek Watershed near Boise, ID

Dry Creek Watershed

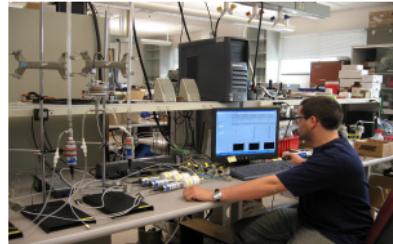

- Established in 1999 to investigate hydrologic processes
- Semi-arid climate, open, dry land vegetation
- Typical of small watersheds in the Idaho Batholith

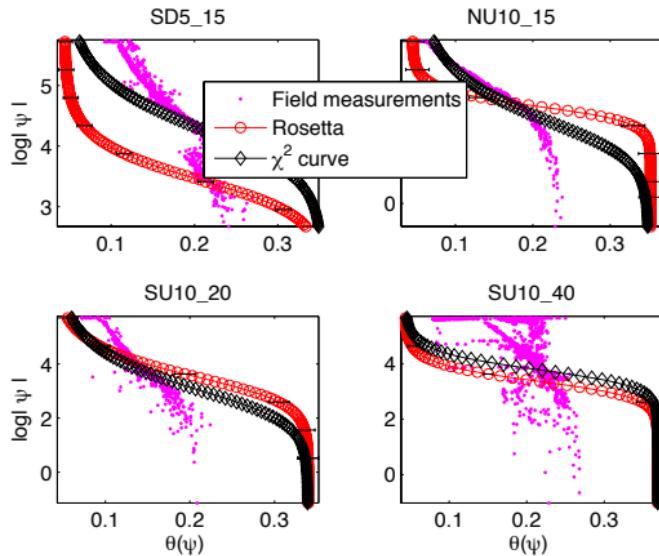

Dry Creek Experimental
Watershed, near Boise, ID

Measurements of Soil Moisture θ and Pressure Head ψ

Two approaches to measuring $\theta(\psi)$ at each soil pit:

Soil Moisture Estimates

Outline of lectures

- Recent work on near subsurface imaging
 - Full physics incorporated in inversion
 - Regularization informed by additional data
- Statistical aspects of inverse methods
 - Noise assumptions
 - Frequentist vs Bayesian
 - Uncertainty estimates
 - Regularization
